

Project: Summarizing With LangChain and OpenAI

OpenAI

Summarization Methods

1. Basic Prompts
2. Prompt Templates
3. DocumentStuffChain
4. map_reduce Chain
5. refine Chain
6. LangChain Agents

Summarization using refine

Prons:

- uses a more relevant context (better summarization)
- less lossy than map_reduce

Cons:

- it requires many more calls to the LLM
- the calls are not independent and can not be parallelized
